START

Introduction

Project Overview

Why Gamerpedia?

Over 5M games are available to the public, which is overwhelming to a beginner (nationaltoday.com 2024)

What is Gamerpedia?

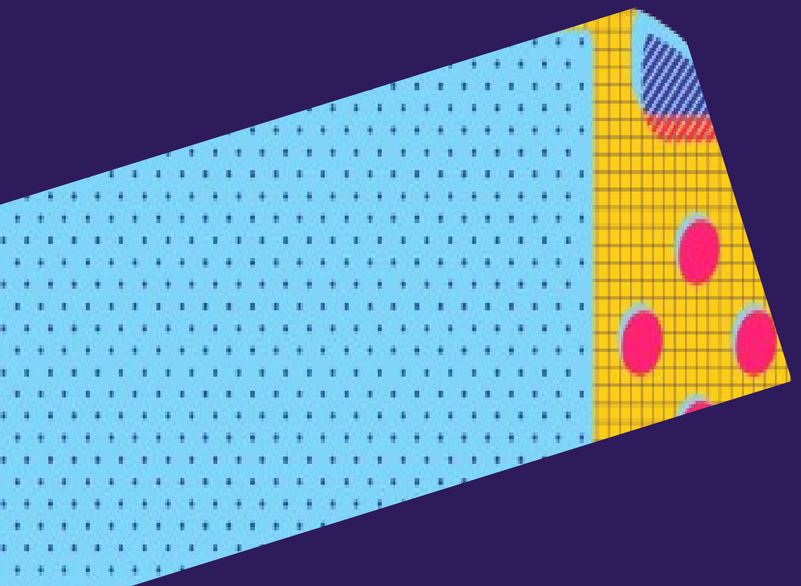

A comprehensive database to help users select games based on their preferences.

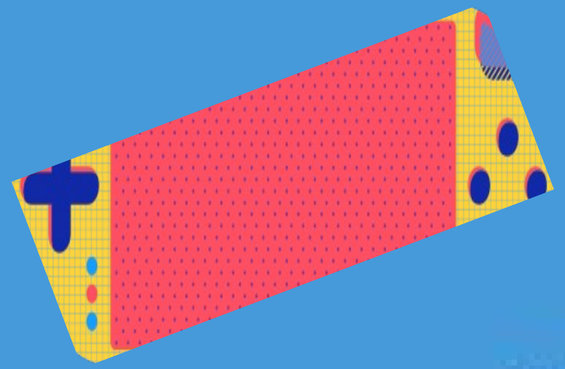

How it relates to Data Science:

- Recommendation Algorithm.
- Database Management.
- API Integration

Our Proc

Key Features

1

Recommendation Engine

2

Game Encyclopedia

Project Goals

Web Development Using Django

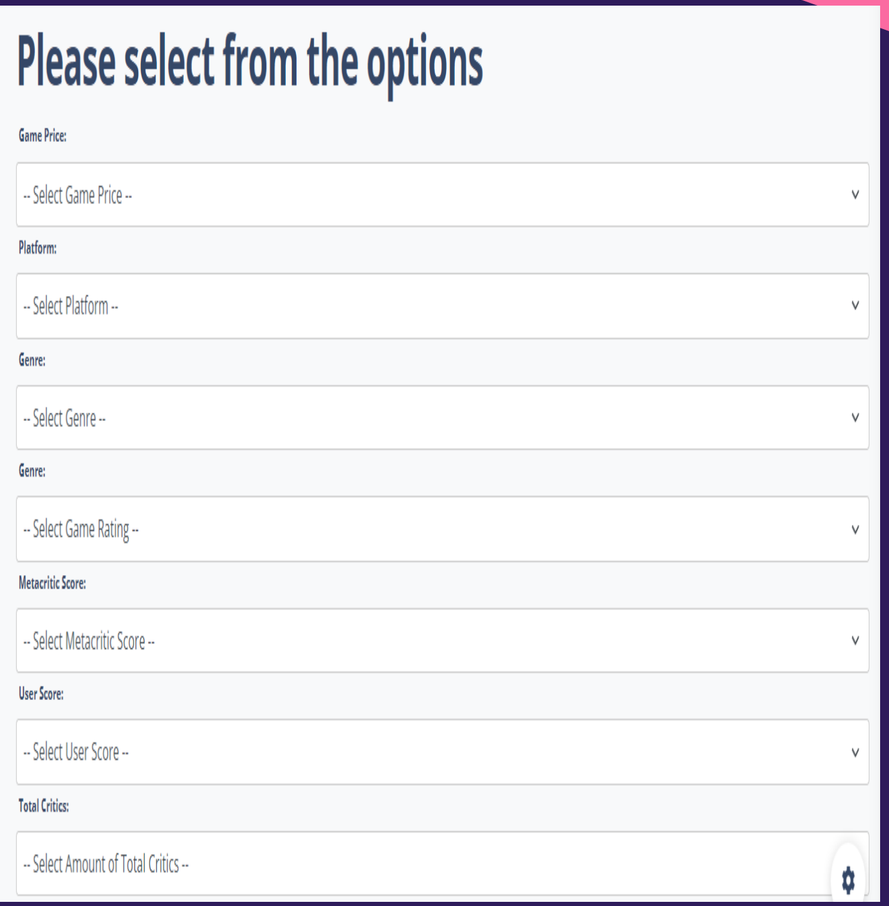

Database Schema Design and Implementation

Recommendation Engine

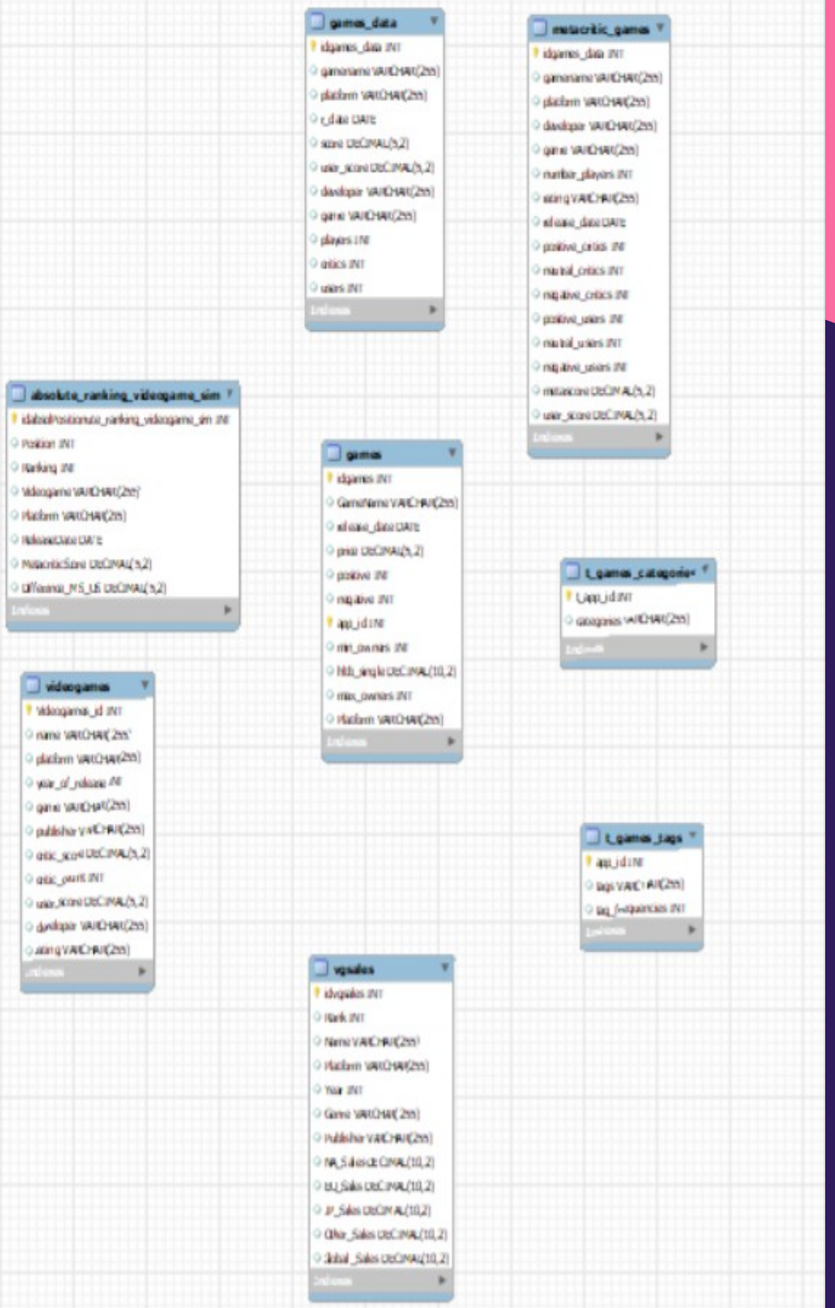

Game Encyclopedia via API request

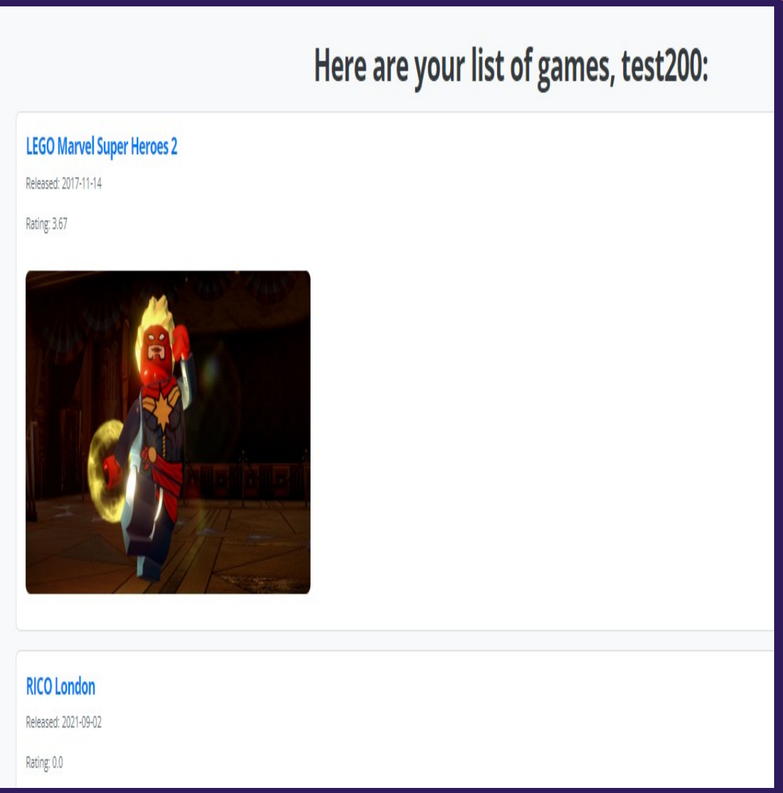

Web Development

Developed a user-friendly interface with optimized navigation and securit features

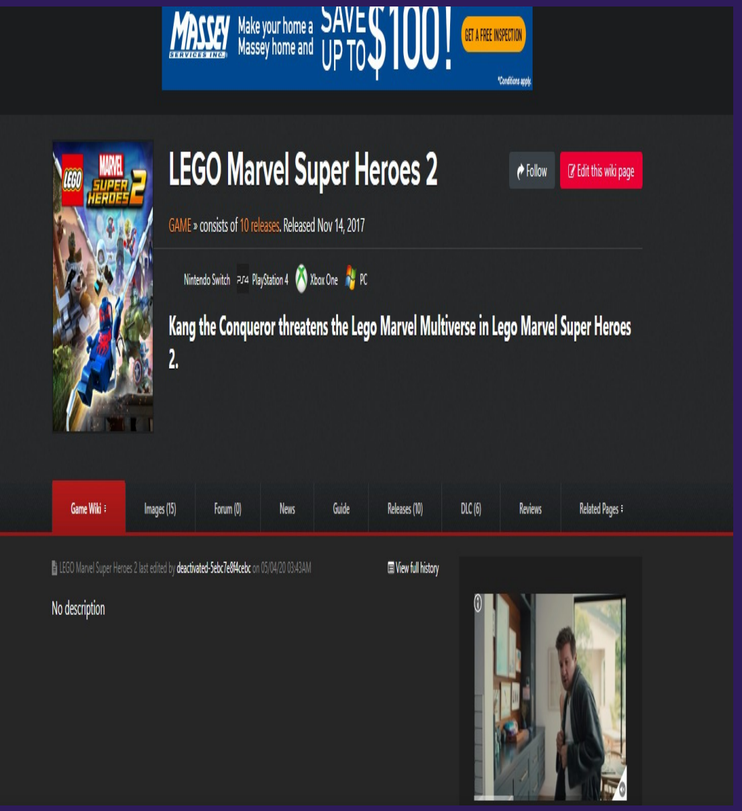

Database Schema Design

Designed a database schema with 11 attributes and over 1.17 million rows

Recommendation Algorithm

Implemented an algorithm based on user scores and Metacritic, with fallback to ChatGPT for ranking.

Game Encyclopedia

Integrated APIs to provide detailed information about games, including playtime, news, and top streamers

Conclusion

“Gamerpedia aims to enhance the gaming experience by helping users find games that match their preferences”

Future Work

- Replace Missing values with the correct data
- Work on creating graphs and charts for the user based on his preference
- Create a more optimized game encyclopedia geared for the Web App
- Push the website to the cloud
- Enable a web scraping feature/API integration to extract Real Time
